Databases:	SQL

Projects / Open-Source

Florify: Web-Based Ordering and Customer Management Information System for AweFlorist
*PHP, React, MySQL, GitHub, JavaScript, Laravel, CSS, Git, HTML**

Developed a web-based flower ordering and customer management system for AweFlorist to improve ordering efficiency and organize customer information.
Identified and addressed issues related to manual order handling, disorganized customer records, and order status monitoring.
Created a responsive user interface using React and implemented server-side functionality with Laravel.
Implemented key features, including product catalogs, custom bouquet orders, order processing, customer data management, payment monitoring, and inventory control.
Integrated WhatsApp contact functionality to facilitate communication between customers and the florist.
Worked collaboratively with a three-person development team using the Scrum framework and Git for version control and task coordination.

Sports Field Booking System Website | Link *Laravel, PHP,Tailwind CSS, Alpine.js.*

Developed a web-based futsal field reservation system to enable customers to book fields online and help administrators manage field operations.
Implemented field booking, schedule management, payment processing, and notification features to support the reservation process.
Built the backend using Laravel 13 and PHP 8.3, with MySQL for reservation data management.
Developed a responsive user interface using Tailwind CSS and Alpine.js.
Provided an admin dashboard to help administrators monitor and manage field booking data.
Used Git and GitHub for source code management and version control throughout the development process.

Personal Finance Tracker | Link *Laravel, PHP, Bootstrap, Alpine.js, Chart.js.*

Developed a web-based personal finance tracking system to help users manage their finances and monitor their financial activities.
Implemented income and expense tracking features to record financial transactions and monitor account balances.
Built the backend to process financial transactions and manage financial data using MySQL.
Developed a responsive user interface using Tailwind CSS and JavaScript to provide a user-friendly experience.
Organized financial records to help users track spending patterns and manage their personal budgets.
Used Git and GitHub for source code management and version control throughout the development process.

Web-Based Food Ordering System for Cafe Pojok Rumah | Link *PHP Native,MySQL,Bootstrap*

- Developed a web-based food ordering system to simplify the ordering process and improve cafe operational efficiency.
- Implemented menu management features to organize food and beverage information, including prices and availability.
- Built an order management module to process customer orders and manage transaction records.
- Designed a responsive user interface to provide a seamless ordering experience on desktop and mobile devices.
- Developed a system to help cafe staff monitor incoming orders and manage order statuses efficiently.
